

First aid at the workplace

As of 09/2026

Fact sheet for IT · First aid · 112 as a web app by MyGuideKey

A web page as an app icon: no installer, no admin rights, no personal data, no cost. Available offline.

What is installed?	A Progressive Web App (PWA) of https://myguidekey.de/112 – a web page in its own window with its own icon. No executable, no service outside the browser, no admin rights required. Alternatively an internet shortcut (.url / .webloc), which only works online.
Browsers	As an app: Microsoft Edge and Google Chrome (Windows, macOS, Linux, ChromeOS). Safari on macOS 14 or later: “Add to Dock”. Firefox: shortcut only.
Connections	Only https://myguidekey.de (port 443). No CDNs, no third-party fonts, no analytics, advertising or social media services. Service workers require HTTPS; TLS-inspecting proxies work if the browser trusts the proxy certificate.
Data and cookies	No sign-in, no forms, no cookies , no tracking, no counting of visits. As with any website, the host keeps technically necessary server log data (Art. 6(1)(f) GDPR).
Hosting	STRATO AG, Berlin. Servers in Germany, data processing agreement under Art. 28 GDPR.
Permissions	None. No location, no notifications, no access to camera, microphone, files or clipboard. The country for the emergency numbers is taken from the browser's language setting or chosen on the page.
Offline	A service worker (/sw-112.js) stores the first-aid page in five languages and two icons in browser storage (about 130 KB, cache “mgk-112-v1”). It only handles /112 and /xx/112/ ; all other requests pass through unchanged.
Freshness	With a connection the app always shows the current version from the server. Without one – or if the server does not respond within 4 seconds – the stored version. Requirement: the app has been opened once with internet access (this happens during installation). There are no client updates; content is maintained centrally.
Tested	Automated tests on 27 Sep 2026 (Chromium): browser restart without network, all five language versions, server unreachable, server not responding (page after about 4 s), storage cleared (fallback screen with 112). If <i>all</i> browser data is deleted, the page is available offline again only after the next visit with internet access. We recommend a short test in your own environment.
Central roll-out	Policy WebAppInstallForceList for Edge or Chrome, deployed via Group Policy, Intune or another MDM: <pre>[{"url": "https://myguidekey.de/112?app=1", "default_launch_container": "window", "create_desktop_shortcut": true}]</pre>
Removal	Remove the entry from the policy – Edge and Chrome uninstall the app at the next policy refresh. Individually: <code>edge://apps</code> or <code>chrome://apps</code> → Remove. Stored data: clear site data for myguidekey.de.

Content

General first-aid steps, a beat for chest compressions, emergency and poison control numbers per country (DE, AT, CH, LU, BE, NL, FR, IT). Based on the recommendations of the German Resuscitation Council (GRC) and the European Resuscitation Council (ERC). Not a substitute for a first-aid course, company first-aiders or the legally required first-aid notice.

Cost

Free of charge, no contract, no sign-in.
